

# SPACE CABIN

Pioneers in whole  
body cryotherapy

# Why us?

Space Cabin has been produced for over fifteen years. As manufacturers we put a strong emphasis on quality improvement, relying on our experience both in production and in research and development, to make sure that our machines are not only safe and reliable, but also easy to operate.

Over the past fifteen years we have developed and manufactured more than ten different models of the Space Cabin cryosauna which vary in design, construction, control options and shell materials. We continue to look for better solutions to create safe and streamlined cryotherapy equipment.

We are firmly committed to providing the best customer service with a focus on the thorough training of your personnel and a full support package, both before and after the sale.

We have customers and distributors in many countries, so that our prospective clients can choose a convenient location to experience our cryotherapy machines first-hand.

# Why a Space Cabin?

Modern technology for natural health

## Reliable

- Upgraded lift with a weight limit of 180 kg
- High-quality and safe materials from trusted suppliers
- Two-year manufacturer warranty
- Quality confirmed by CE certificate

## Cost-effective

- Low liquid nitrogen consumption
- Low power consumption

## Advanced

- 10-inch touch screen control panel with simple user interface
- Daily/monthly/yearly session count
- Remote diagnostic and maintenance via the Internet (Wi-Fi or LAN cable connection required)

## Safe

- Cabin door is not locked, can be easily opened from the inside at any moment
- A large red button on the touch screen and an emergency stop button allow terminating the session immediately if need be.

## Compact

- Compact footprint: a cryosauna covers only 4 sq.m.
- Due to modular assembly small cryosauna components can fit through standard doorways

## Customizable

- A range of colors to choose from both for the interior and the exterior
- Customers' logo can be embroidered on the interior upholstery and displayed on the outer shell
- Mobile solution available, to be installed in a trailer or vehicle

## Readily available

- Shortest lead time, immediate delivery is available upon request
- Delivery, assembly and maintenance anywhere in the world
- Optional delivery from a warehouse in Europe

## Specifications:

- Temperature range in the cryosauna: between **-130° and -170°C**
- Liquid nitrogen consumption: **4 liters** per session on the average
- Power consumption: **1.5 kW**
- Voltage: **220/230V, 50/60 Hz**

# The Aurora Cryosauna

The Aurora cryosauna is made of fiberglass and lined with water-resistant fabric on the inside. You can choose between 180 colors for the outer shell and 10 colors for the interior. Visit our website [www.space-cabin.com](http://www.space-cabin.com) to visualize your options.

This model is available in two versions, with liquid nitrogen fed from a large pressurized tank or from a small non-pressurized Dewar tank.

Contact our managers to get advice about the best option for your business.

## Overall dimensions

- Width: 1,100 mm
- Length: 1,970 mm
- Height: 2,580 mm

# The Classic Cryosauna

The Classic cryosauna is covered with composite on the outside and with special water-resistant fabric on the inside. The model is called “Classic” because it has been manufactured for many years and served as a key element to build up the industry of whole body cryotherapy worldwide. This is a minimalist solution, smaller than the Aurora cryosauna, with custom colors available for the interior fabric.

This model is available in two versions, with liquid nitrogen fed from a large pressurized tank or from a small non-pressurized Dewar tank.

Contact our managers to get advice about the best option for your business.

## Overall dimensions

- Width: 1,000 mm
- Length: 1,550 mm
- Height: 2,200 mm

# PERSONALIZED SOLUTIONS

We adapt to our customers' requirements and provide flexible solutions most suitable for your needs.

Our managers advise you on available options and help you choose the best ones depending on your business, location, interior design. For example, if you expect to have more than twenty customers per day, a valve cryosauna would be a good choice. A Dewar cryosauna is more suitable for smaller rooms on higher floors. Depending on the customers you service (e.g. basketball or rugby players) the cabin in the Classic model can be made wider and taller, in XL size. For Home version the cabin can be made smaller, in S size.

We offer [mobile cryotherapy solutions](#), with a Space Cabin cryosauna installed in a vehicle or trailer, thus enabling the owner to deliver services where they are needed. This works well on the seaside where a mobile cryosauna can travel from place to place, or for athletes who are always on the move.

The outer shell and the interior fabric colors are customizable. In addition, your company logo can be embroidered inside the cabin or displayed on the outside.

# CUSTOMER SERVICE

Our equipment is upgraded based on our customers' feedback to make our cryosaunas safer, more reliable and easy to use.

We are able to deliver our units anywhere in the world and provide you support in assembling them both on-site and remotely. However, in most cases our assistance is not necessary due to modular design of our cryosaunas and a thorough step-by-step assembly guide we provide.

To ensure proper operator training we have developed in-depth training programs with a mandatory theoretical and practical exam. Training can be delivered both remotely and on-site.

In addition, we partner with local companies to make sure our customers receive the best service in their country in their native language.

Our service department is online twenty hours per day to make sure our customers can receive assistance if any issue arises. Maintenance can be performed remotely via the Internet. We provide maintenance and repairs even after the two-year warranty has expired.

# Why cryotherapy?

Whole-body cryotherapy (from Greek kryos - cold and therapy) is a technique that involves short exposures to air temperatures below  $-100^{\circ}\text{C}$ .

## Natural healing

Super-low temperatures are a cutting-edge and efficient way to trigger self-healing mechanisms. Cryotherapy activates the body's natural defenses and that is why it is completely safe. Besides, due to the brief exposure the body core temperature remains unchanged and the skin temperature does not drop below  $5^{\circ}\text{C}$ . Whole-body cryotherapy provides powerful anti-inflammatory response and pain relief.

## Wellness and beauty

Cryotherapy makes all systems of the body work to their fullest potential. Short-time (1 to 3 minutes) cooling of the upper skin layer, no more than 0.5 mm deep, helps to boost metabolic processes, decrease anxiety and fatigue, improve sleep, and stimulate the immune system.

## Endorphin rush

Cold air feels more comfortable than cold water or ice baths, because at super low temperatures the air contains no moisture. As a bonus the cold triggers the production of endorphins, called “feel-good hormones”, which make you feel euphoric.

## Safest adventure

Cryotherapy is an easy and quick way to experience something new and exciting, and also to boost your energy, and all that with benefits for your health and beauty.

## Edge for athletes

Whole-body cryotherapy has become a powerful training and recovery tool both for professional athletes and for amateurs. Before training it helps to boost performance. After intense workouts cryotherapy sessions improve recovery time relieving fatigue and delayed onset muscle soreness. In addition, whole-body cryotherapy is used to heal athletic injuries due to its ability to suppress pain for several hours, as well as relieve edema and stiffness.

# Cryotherapy as a business

Buying a cryotherapy device is a good investment in an industry which keeps growing annually.

Our equipment is classified as non-medical, it requires no licensing. It is enough to have a room, hire an operator to conduct sessions, and launch a promotional campaign.

No special insurance is needed; having a comprehensive general liability policy will be sufficient.

It is important to find a local liquid nitrogen supplier, because the price of liquid nitrogen influences the session cost. See below the data to calculate your payback period (with twenty visitors per day).

With a power consumption of 1.5 kW per hour and the cryosauna working two hours per day (20 visitors x 3 minutes = 1 hour plus 60 minutes of drying), you can calculate the cost of electric power per day and per month.

Liquid nitrogen consumption per one 3-minute session is 4 liters on the average. Daily consumption of liquid nitrogen for 20 3-minute sessions totals 80 liters. Thus, you can calculate your monthly consumption.

Calculate the salary of an operator.

Average cost of a session is 30 to 70 EUR, depending on the local price of liquid nitrogen.

If you want to have a cryosauna as a stand-alone business, rent costs will be added. It is enough to have one room if a changing booth is installed in the room with the cryosauna.

Due to our cryosaunas' low liquid nitrogen and power consumption your session cost is low thus ensuring a rapid return on investment. At present cryotherapy devices are often featured in fitness centers, beauty salons, rehabilitation centers, hotels, spas, health resorts and so on.

### Become our distributor

We are expanding our distributor network and invite companies who want to join a rapidly growing industry of whole-body cryotherapy to become our partners. Our representatives in emerging markets receive advice on their marketing campaign, special terms for promotional equipment, and full access to our media database with photos, videos, articles, as well as a medical research database.

Space Cabin cryosaunas are used by professional sport teams and athletes, like Juventus F.C., Lazio F.C., Roma F.C., Paris Saint-Germain F.C., River Plate F.C., Phoenix Suns, Dallas Mavericks, as well as by Ronaldo, Neymar, Gareth Bale, Zlatan Ibrahimovic, Shaquille O'Neal, Kobe Bryant, LeBron James, Usain Bolt, to name a few.
